**Drilling Resumes**

David Patterson, Chief Executive Officer of Donner Minerals Ltd., reports that drilling has resumed on the South Voisey Bay Project. Drilling was suspended for approximately 1 month to allow the ongoing Pulse EM geophysical survey an opportunity to confirm existing geophysical and geological targets and identify additional geophysical targets for follow-up drilling in the remainder of the program. The Pulse EM survey, which is approximately forty percent complete, continues to be carried out over the core area of the South Voisey Bay Project. The geological model for the South Voisey Bay Project is essentially identical to that which hosts world class metal deposits at Voisey's Bay. The ongoing diamond drill program is designed to locate massive sulphide accumulations at the base of the gabbro, feeder zones containing massive sulphides, and massive sulphides within the underlying gneisses.

ON BEHALF OF THE BOARD OF DONNER MINERALS LTD.

David Patterson  
Chief Executive Officer
